DN = Nominal size

k_{vs} = Nominal flow rate of cold water (5...30 °C) through the fully open valve (H_{100}) by a differential pressure of 100 kPa (1 bar)

S_v = Rangeability k_{vs} / k_{vr}

k_{vr} = Smallest k_v value, at which the flow characteristic tolerances can still be maintained, by a differential pressure of 100 kPa (1 bar)

¹⁾ If noise is permitted, the same values apply as for mixing

Δp_{\max} = Maximum permissible differential pressure across valve's control path, valid for the entire actuating range of the motorized valve

Valve cross section

- The guided parabolic plug is attached to the valve stem.
- The seat in the through-port is embedded.
- The seat in the bypass is machined into the valve body.
- From DN 25 the seat in the through-port is machined into the valve body and the seat ring in the bypass embedded.

Sizing

Flow diagram

- Δp_{max} = Maximum permissible differential pressure across the valve's control path, valid for the entire actuating range of the motorised valve
- Δp_{v100} = Differential pressure across the fully open valve and the valve's control path by a volume flow V_{100}
- \dot{V}_{100} = Volume flow through the fully open valve (H_{100})
- 100 kPa = 1 bar \approx 10 mWS
- 1 m³/h = 0.278 l/s water at 20 °C

Valve flow characteristic

- Through-port: linear as per VDI /VDE2173
- Bypass: linear as per VDI /VDE2173

Mixing:
Flow from port II and port III to port I

Diverting:
Flow from port I to port II and port III

- Port II = variable flow
- Port III = Bypass (variable flow)
- Port I = constant flow

Use the three-port valve primarily as a mixing valve.

Notes

Engineering Always use a strainer upstream of the valve to increase the valve's functional safety.

Mounting Both valve and actuator can easily be assembled at the mounting location. Neither special tools nor adjustments are required.
The valve is supplied with Mounting Instructions 4 319 9597 0.

Direction of flow When mounting, pay attention to the valve's flow direction symbol:

- Mixing from II / III to I
- Diverting from I to II / III

Commissioning  **Commission the valve only if the manual knob or actuator have been mounted correctly.**

- Valve stem retracts: Through-port II – I opens, Bypass III closes
- Valve stem extends: Through-port II – I closes, Bypass III opens

Maintenance

Warning 

VXG48... valves require no maintenance.

When doing service work on the valve / actuator:

- Deactivate the pump and turn off the power supply
- Close the shutoff valves
- Fully reduce the pressure in the piping system and allow pipes to completely cool down

If necessary, disconnect the electrical wires.

Before putting the valve into operation again, make certain the actuator is correctly fitted.

Stem sealing gland

The stem sealing gland cannot be exchanged. In the case of leakage, the entire valve must be replaced. Contact your local office or branch.

Disposal

Before disposal the valve must be dismantled and separated into its various constituent materials.

Legislation may demand special handling of certain components, or it may be sensible from an ecological point of view.

Current local legislation must be observed.

Warranty

The technical data given for these applications is valid only in conjunction with the Siemens actuators as detailed under «Equipment combinations».

All terms of the warranty will be invalidated by the use of actuators from other manufacturers.
